The sequence contained an oligo-dT track that was present in the
oligonucleotide that was used to prime the synthesis of first
strand cDNA and therefore this may represent a bonafide poly A
tail. cDNA Library Preparation: M.B. Soares Lab Clone distribution:
clones will be available through Research Genetics (www.resgen.com)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence encodes murine muscle ring finger protein 1 (MURF-1). The cinvention relates to a purified muscle ring finger (MURF) protein, selected from MURF-1, MURF-2 and MURF-3. The MURF proteins of the cinvention are involved in microtubule and intermediate filament crossibilisation of striated muscle cells and have cardiant activity. The MURF proteins are useful for screening a candidate substance for MURF protein-binding activity, in a cell, cell-free system or community and its effect on interaction of MURF with microtubules, commodimerisation of MURF-1, MURF-2 or MURF-3 stabilisation of microtubules, interaction of MURF with intermediate filaments, ce.g. desmin, vimentin and cytokeratin, and heterodimerisation of MURF. The screened compounds are useful for treating and preventing cardiac hypertrophy and heart diseases. MURF proteins are useful as antigens to immunise animals for the production of antibodies.

The present invention describes oligonucleotide libraries for detecting CC messenger RNAs that populate a (sub-)transcriptome, where the CC (sub-)transcriptom units that populate a genome. The library comprises cCC several oligonucleotides, each capable of hybridising selectively to a CC set of messenger RNAs transcribed from multiple CC the genome, which encodes one or more messenger RNA splice variants. CC the contracterising the corresponding transcriptome, and in CC contitatively characterising the corresponding transcriptome, and in CC transcriptomes. The libraries may also be used as specialised mini CC transcriptomes. The libraries may also be used as specialised mini CC particular biological or pathology-specific genes such as those genes conjugation; to detect transcripts of a sub-transcriptome under a particular biological or pathology-specific genes such as those genes conjugation; to detect developmental specific pathological CC condition; to detect developmental specific penes; and to detect RNA CC condition; to detect developmental specific pathological of conjugations and splice variants of a transcriptome of a particular disorder. ABN27253 to ABN59589 represent conjugation of the present invention.

CC at fire who introduce data for this patent did not form part of the printed contraction, but was obtained in electronic format directly from WIPO at the pathology-whiled and the general contract. ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is a human protein coding sequence. The human protein, preferably originated from tumour cell line, is applicable as a drug, a reagent for studying intracellular protein networks and a protein source for screening proteins for binding low molecular weight drugs. The human protein coding sequence is useful for gene diagnosis and gene therapy, expression vectors and transformant cells for detection of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1183 CGGCCGGAGCCAGGCTATGAGAGCATGGAGCAATTC 1218
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1099 CGGCCGGAGCCAGGCTATGAGAGCATGGAGCAATTC 1134
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     protein (CAP) that is differentially expressed in human left ventricle assist device (LVAD) myocardial biopsy samples. The predicted isoelectric point of CAP is approximately 12.2. The CAP polynucleotide and polypeptide are useful for diagnosing, preventing or treating cardiomyopathy. The treatment diminishes the occurrence of at least one of the following symptoms associated with cardiomyopathy: reduced ejection fraction, increased left ventricular diagnosing dimension,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is the coding sequence for a human cytoskeleton-associated protein (CSAP). The CSAP and its coding sequence are useful in the diagnosis, treatment and prevention of a cell proliferative disorder such as actinic keratosis, atherosclerosis, psoriasis, primary thrombocythaemia, leukaemia, a viral infection such as psoriasis, primary thrombocythaemia, leukaemia, a viral infection such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel isolated human cytoskeleton-associated protein for diagnosing, treating or preventing atherosclerosis, psoriasis, leukemia, epileps; ischemic cerebrovascular disease, cerebral neoplasms and Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              those caused by adenoviruses (acute respiratory disease, pneumonia), arenaviruses (lymphocytic choriomeninigitis); and a neurological disorder such as epilepsy, ischaemic cerebrovascular disease, stroke, cerebral neoplasms, Alzheimer's disease, Pick's disease, Huntington's disease or amyotrophic lateral sclerosis. The CSAP coding sequence is also useful for creating knock out or knock in humanised animals or transgenic animals to model human diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gietzen

The MURF proteins are useful for screening a candidate substance for MURF protein-binding activity, in a cell, cell-free system or in vivo, and its effect on interaction of MURF with microtubules, homodimerisation of MURF, MURF-1, MURF-2 or MURF-3 stabilisation of microtubules, interaction of MURF with intermediate filaments, e.g. desmin, vimentin and cytokeratin, and heterodimerisation of MURF. The screened compounds are useful for treating and preventing cardiac hypertrophy and heart diseases. MURF proteins are useful as
                                                                                                                                                                                                                      31-JAN-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antigens to immunise animals for the production of antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The sequence encodes murine muscle ring finger protein 3 (MURF-3). The invention relates to a purified muscle ring finger (MURF) protein, selected from MURF-1, MURF-2 and MURF-3. The MURF proteins of the invention are involved in microtubule and intermediate filament
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    diagnosing and treating diseases, particularly cardiomyopathies

The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked include autoimmune diseases e.g. rheumatoid arthitis, hyperproliferative disorders e.g. neoplasms of the breast or liver,
                                                                                                                                                                                                                                      New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions used as food additives or preservatives -

                                                                                                                                                                                                                                                                                                                                                    Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present sequence encodes a novel secreted protein of the invention.
                                                                                                                                                                                                                                                                             17-JAN-2001;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection, and many other disorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to

New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and

The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunoasorbant assays (ELISA). Disorders which are diagnosed or treated Alineimer's disease, infections caused by bacteria, viruses and fur and ocular disorders e.g. corneal infection, and many other disorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiovascular disorders e.g. cardiovascular disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. prevent skin aging due to sunburn, maintain

The polypeptides can also be as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present
                                             The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design

                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                    Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
               Drosophila melanogaster expressed polynucleotide SEQ ID NO 38711
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                          26-MAR-2002
                                                                                                                                                   ABL14743;
                                                                                                                                                                                                     ABL14743 standard; cDNA; 8574
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1; SEQ ID NO 24187; 21pp + Sequence Listing; English.

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated nucleic acid genes from Drosophila and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      P-PSDB;

CC compounds of the progression of these to take expects by december to global changes in gene expression in tissues or cells exposed to the cells. Also included are methods of predicting at least one toxic ceffect of a compound or progression of a toxic effect, preferably the ceffect of a compound or progression of a toxic effect, preferably the ceptression in a tissue or cell sample exposed to the level of ceptression in a tissue or cell sample exposed to the compound of two or ce expression in a tissue or cell sample exposed to the compound of two or ce expression in a tissue or cell sample exposed to the compound of two or ce expression in a tissue or cell sample exposed to the compound of two or ce expression also be used to identify an agent which modulates the compound can also be used to identify an agent which modulates the compound modulates the cell. The methods utilise a set of at least two probes (on a solid comport in kit form), where each of the probes comprises a sequence that compount modulates to a gene listed in the specification, a computer system comprising at least two genes listed in the specification, a computer comprising at least two genes listed in the specification, a computer set of genes comprising at least two genes listed in the specification, a computer composed to a gene information used to present information composed to a hepatotoxin of a containing information used to present information composed to a hepatotoxin of a containing information used to present information composed in the specification, a composed to a known toxin. The genes may be used as containing the containing global characterised by centrilobular necrosis and steatosis. The present contained the probability markers for the genes and contained toxin in the probability markers for the containing probability and the probability markers for the probability of the containing and steatosis. The present contains the probability of containing and the probability of containing and the probability of containing and t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      predicting toxic effects of compounds or the progression of these effects by determining the changes in gene expression in tissues o cells exposed to the toxin and comparing these to gene expression unexposed tissues or cells -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to methods for predicting toxic effects of compounds or the progression of these toxic effects by determining the compounds or the progression in tissues or cells exposed to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; Seq ID No 81; 239pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to 625 polynucleotides which have been derived from Ca variety of human tissue sources and which encode novel secreted proteins, their complements and sequences that hybridise to them. CC Also included are a vector comprising the polynucleotide, a host cell CC transformed with the vector, the proteins encoded by the CC polynucleotides, antibodies that bind to the proteins and identification of modulators of the proteins or the expression of the polynucleotide. CC The polynucleotides can be used as probes for the identification and isolation of full length cDNA and genomic DNA. The polynucleotides can be used as nutritional supplements. The protein CC and proteins can also be used as nutritional supplements. The protein CC is useful in the treatment of various immune deficiencies and disorders cutoimmune disorders (e.g. rheumatoid arthritis, multiple sclerosis, CC autoimmune thyroiditis and diabetes) and allergic reactions and CC conditions (e.g. asthma). They are also useful for treating proteins and conditions (e.g. asthma). They are also useful for reactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         neurodegenerative diseases (e.g. Alzheimer's disease, Parkinson's disease), liver fibrosis, coagulation disorders (e.g. haemophilia), inflammatory disorders (e.g. Crohn's disease) and tumours. They are also useful for tissue regeneration, for wound healing and in the treatment of burns, incisions and ulcers. The proteins are also useful for regulating haematopoiesis, for treating myeloid or lymphoid cell deficiencies. The present sequence is one of the 625 cDNA sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated polynucleotide (ABN27253-ABN33262) with cytostatic activity. The polynucleotide is used to produce a polypeptide, to detect differentially expressed genes correlated with a cancerous state of a mammalian cell and to inhibit tumour growth. The polynucleotide is used as a probe in mapping and tissue profiling. The encoded polypeptide and antibodies to the polypeptide can also be used for therapeutic and diagnostic purposes. The polynucleotide is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1; SEQ ID NO 408; 883pp + Sequence Listing; English

                                                                                                                                                                                                                                Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              protein expression or activity. The polypeptides can be used as molecular weight markers, food supplements, and in antibody production. The polypeptides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and primers, for sequencing, for chromosome or gene mapping, in the production of recombinant proteins, and in generating anti-sense DNA or RNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to
                                                                                                                                                                                                                                                                                                                                                                                                                 raise antibodies/elicit an immune response, to determine quantitative protein levels, as tissue markers, and to isolate receptors or ligands. Polypeptides of the invention may also be useful in treating platelet disorders, stem cell disorders, regenerating bone, cartilage, tendon, ligament and/or nerve tissue, wound healing, treating burns, promoting the proliferation, differentiation and survival of stem cells, as a contraceptive, treating osteoporesis and osteoarthritis, anaemia, alzheimer's, Parkinson's and Huntington's diseases, amylotrophic lateral sclerosis, stroke, immune deficiences resulting from bacterial, viral of from antigeness resulting from bacterial, viral or from autofunctors responsed.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
